

SMART INDIA HACKATHON 2025

- **Problem Statement ID** – SIH25023
- **Problem Statement Title** - AyurSutra-Panchakarma Patient Management and therapy scheduling Software
- **Theme-** MedTech / BioTech / HealthTech
- **PS Category-** Software
- **Team ID-** 83159
- **Team Name-** Team_Agni_RCP_02

Idea/Solution/Prototype

- **A smart panchakarma platform** – Single system that helps with therapy management, digitalized records, scheduling automation.
- **Ai-powered personalization** – Recommend individualized treatment plans, ai/ml will examine feedbacks and symptoms.
- **Real-time progress tracking** – Using user-friendly dashboards, patients & doctors can monitor progress.

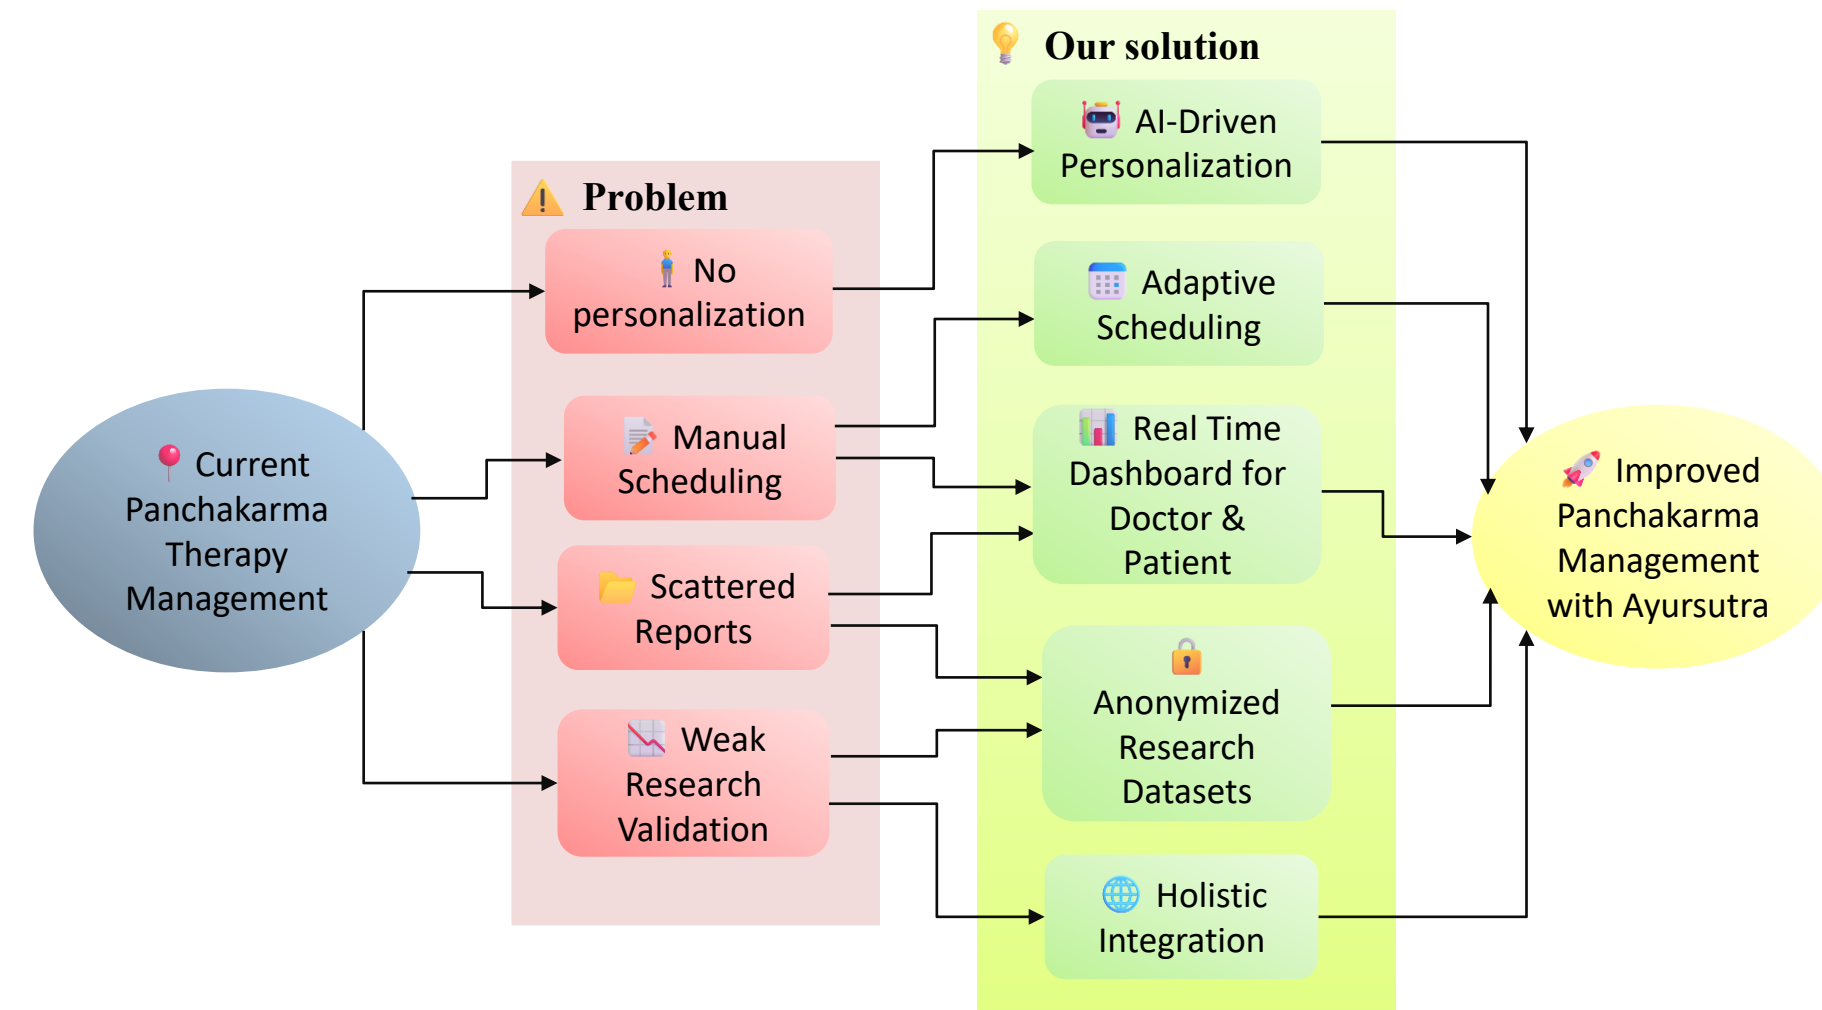

Solution Approach

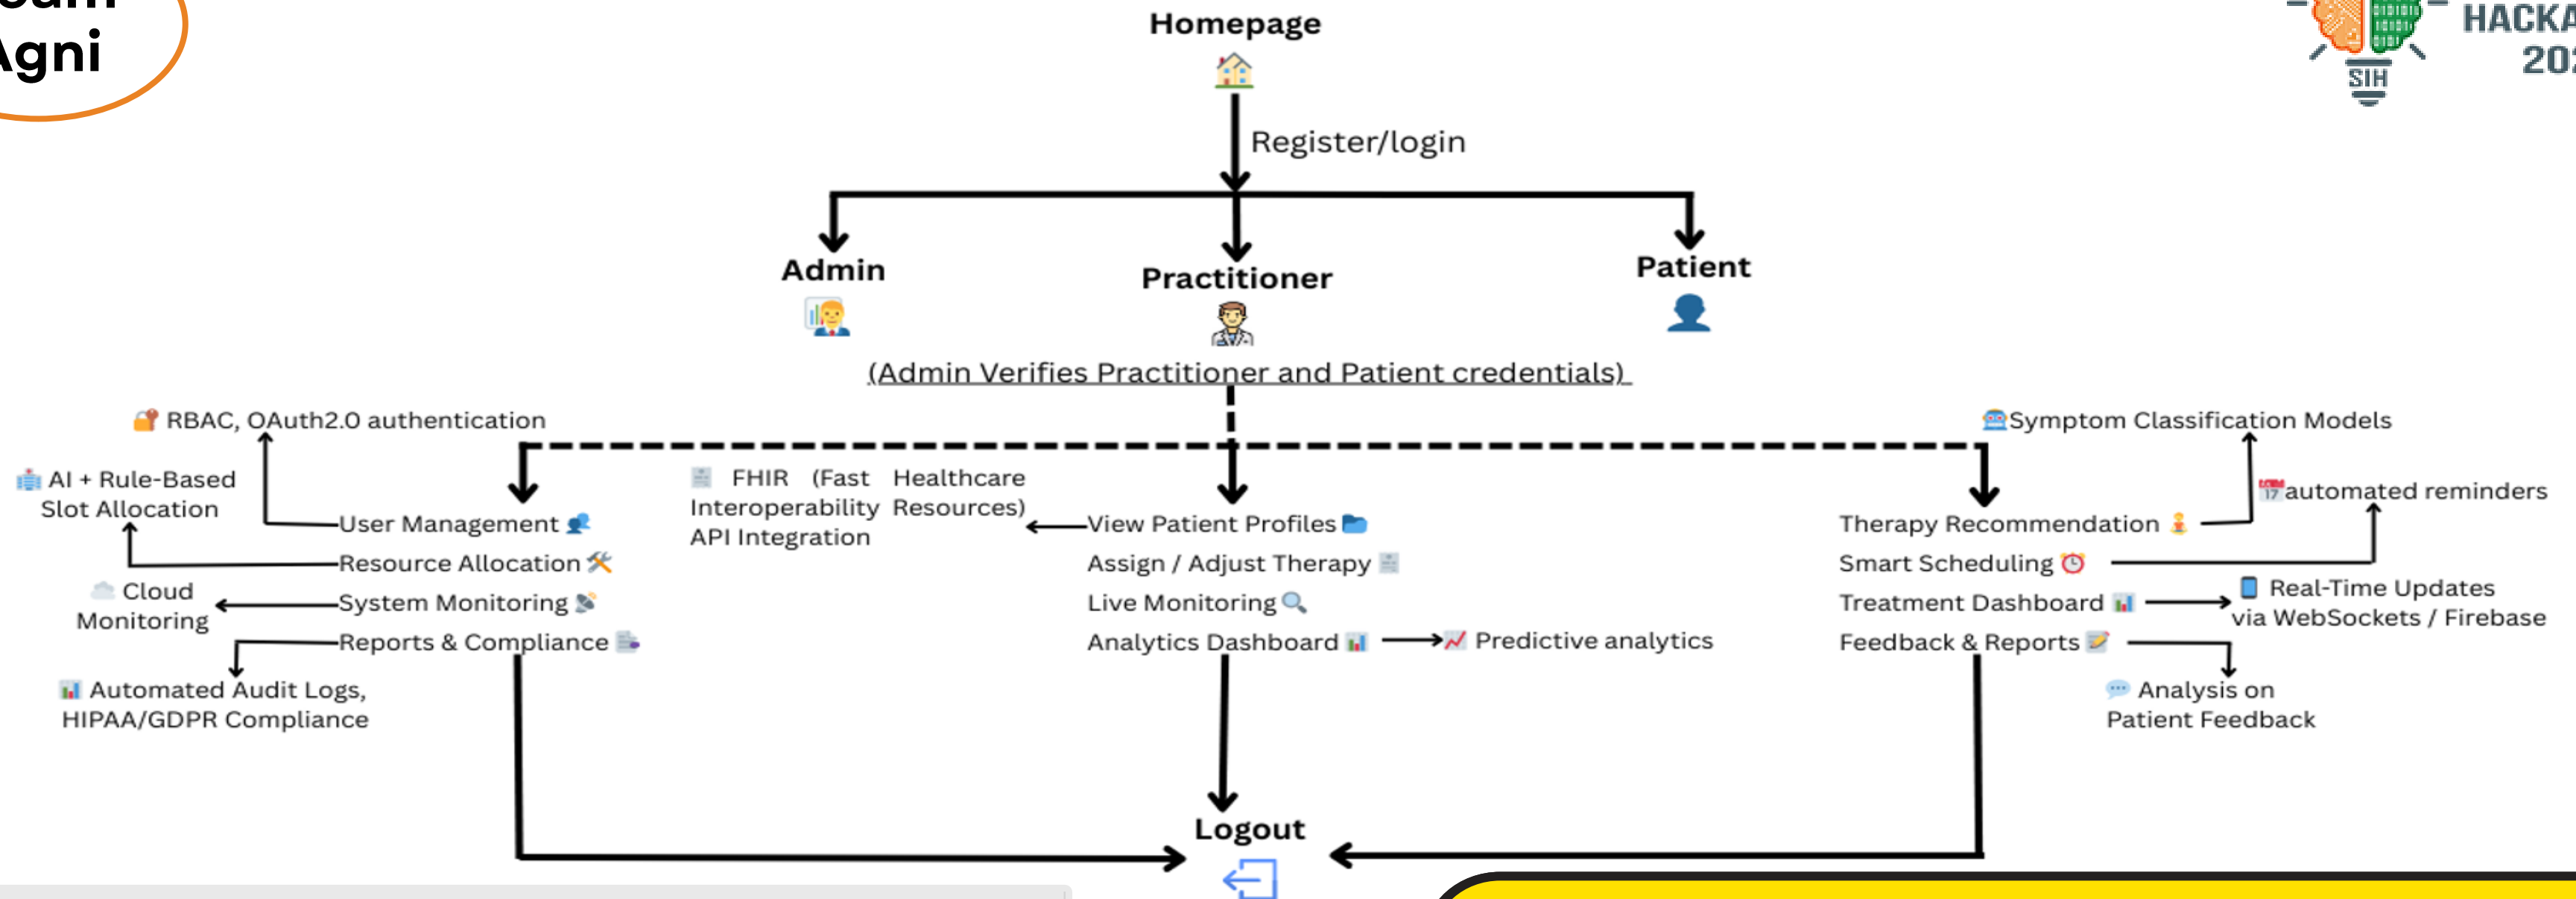

- **An Automated Scheduling** – AI plus rules will decide best session timings, practitioner allocation and resource use.
- **Multi-Channel Reminders** – The Patients will get SMS, app and email notifications for what to do before and after therapy.
- **Therapy Tracking Dashboard** – It Tracks live session data, vitals and whether the patient is following the treatment.
- **Feedback-Driven Adjustments** – If the patient reports issues or side effects then system automatically adjust the therapy plans.

Innovation & Uniqueness

1. **Personalized Care** – A Custom recovery based on dosha type , feedback and progress.
2. **Visual Progress Tools** – An Easy to read graphs & dashboards showing the health improvements.
3. **An Adaptive Scheduling** – If a patient misses steps or reports problems then system automatically reschedules.
4. **Research Support** – It will Provides anonymous data to AYUSH & AIIA for validating Panchakarma effectiveness.

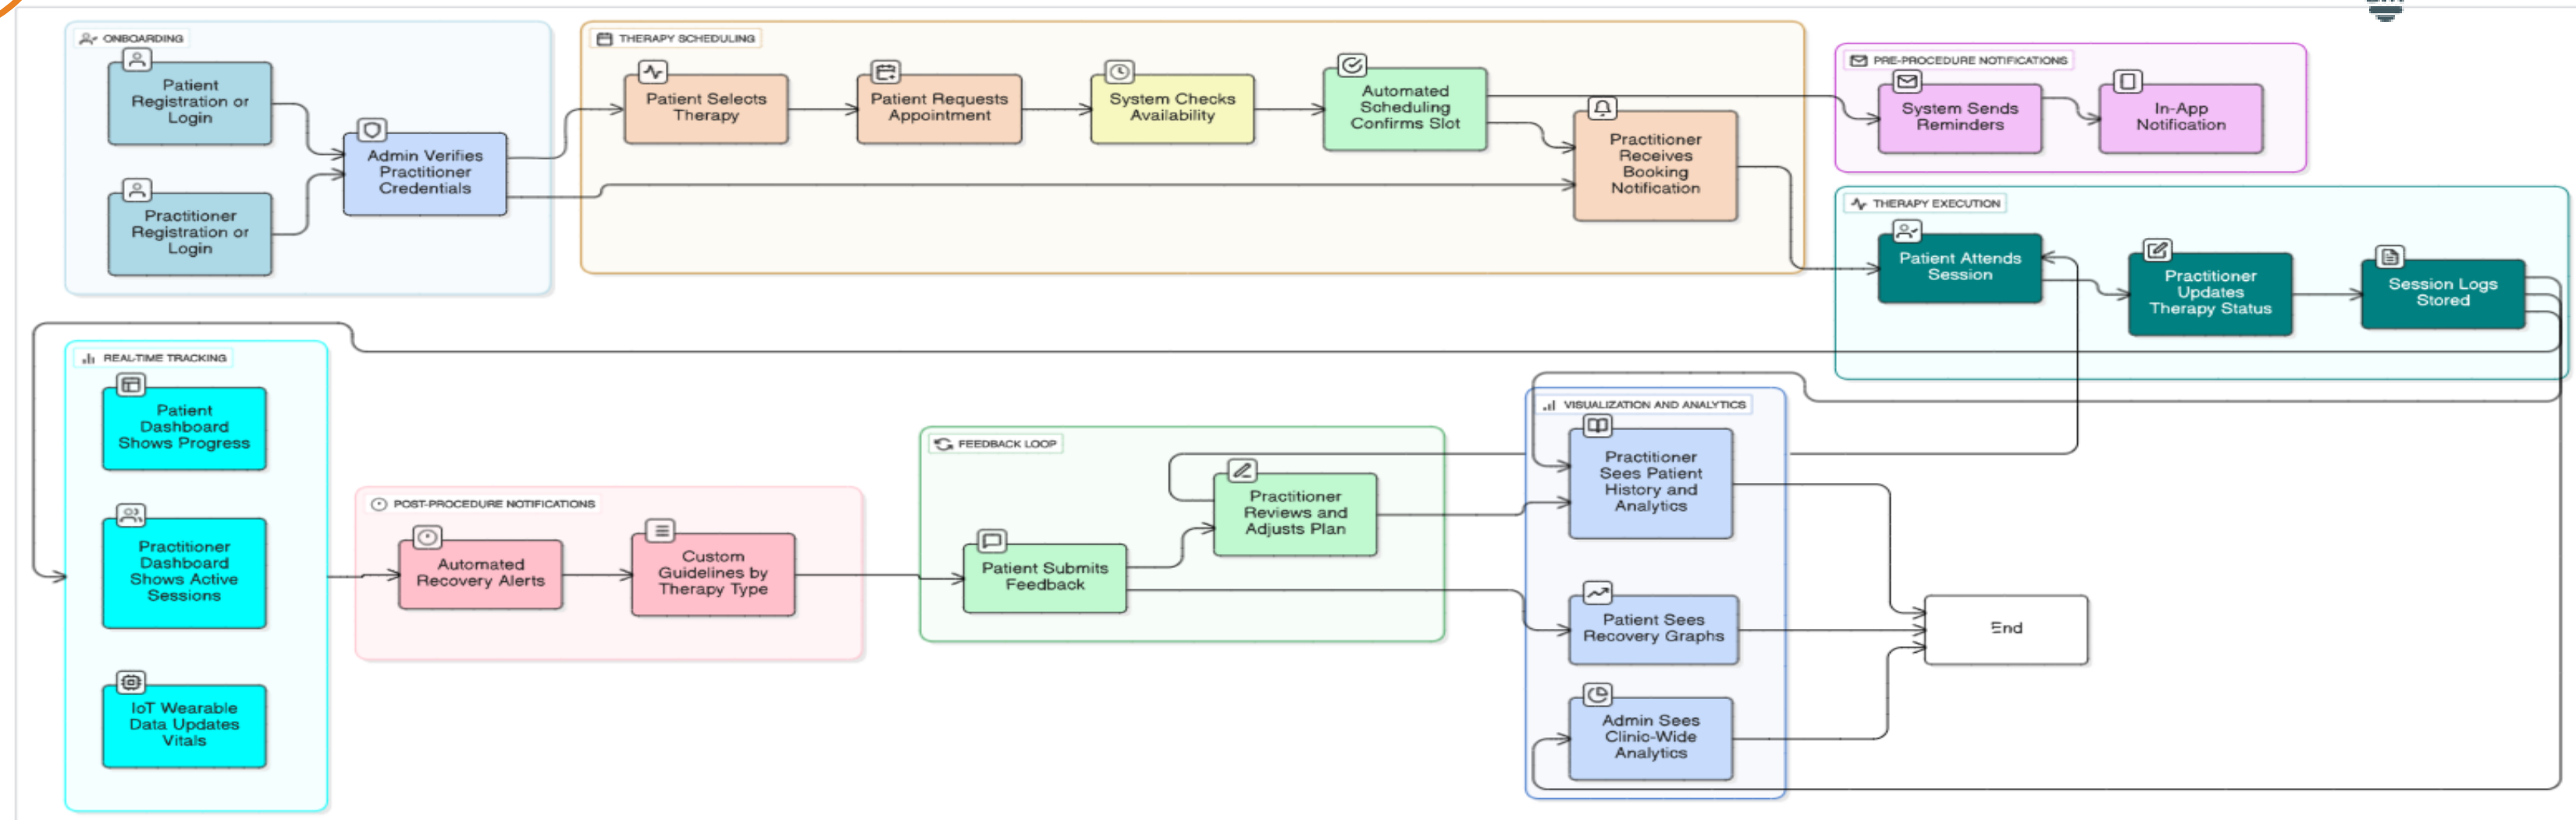

TECH STACK

METHODOLOGIES:

- **NLP Analysis** – It Understands symptoms, improvements and side effects.
- **Symptom Classification** – It Maps symptoms or dosha imbalance & will give best therapies.
- **Recommendation Engine** – Also Schedules personalized therapies.
- **Predictive Analytics** – Forecasts the progress and adjusts milestones.
- **Anomaly Detection** – Monitors risks and the safety.

Panchakarma Management Software Flow

Feasibility Analysis

- **Technological Feasibility:** SMS or Email via Twilio, AWS SNS, FCM.
- **Operational Feasibility:** Simple adoption , reduces manual scheduling.
- **Economic Feasibility:** less errors, lowers operational costs.
- **Market Size:** Ayurveda market USD 16B (2026), thousand of clinics , 1 % share big business.

Potential Challenges & Risks

- **Adoption Resistance:** Preference for manual methods.
- **Data Privacy & Security:** Compliance with HIPAA / Indian Data Protection.
- **Integration Challenges:** Existing hospital systems.
- **Connectivity Issues:** Limited internet in rural area.
- **Scalability:** Performance bottlenecks with big data.

Overcoming challenges

- **Liability & Disclaimer :** Mitigated with disclaimers, audit logs, and practitioner validation.
- **Connectivity Issues :** Offline-first approach Data stored locally and synced when online.
- **Seamless Integration:** Our system uses standardized APIs that means we can plug and play with any existing clinic software .

Effective Impact

What Target Achieves??

✓ **Less work for people to do**

- Patients will never miss therapy even if they forget or busy, due to auto-rescheduling feature.
- Step by step instructions and reminders for pre & post care helps to get better health outcomes.

✓ **Growth of market**

- Panchkarma software can gain a sizeable market share due to digitalized therapy management.
- Promote transparency and data driven progress tracking which foster trust among patients.

✓ **Citizens/Healthcare Beneficiary.**

- Personalised treatment plans, digital reports and reminders decrease rate of missed appointments.

Benefits

SOCIAL

- 📌 Reduces the treatment errors by standardized the digital workflows.
- 📌 Enhances health outcomes through the personalized treatment tracking.

ECONOMICAL

- 📌 Reduces an operational costs automated administrative processes
- 📌 Increases a clinic revenue by 20-30% through optimized patient capacity

ENVIRONMENTAL

- 📌 Eliminate the paper usage across all clinical documentation processes.
